

Marquette Robotics Mission Statement

The Marquette Robotics Team enables students to be science and technology leaders. Working with mentors from the engineering field, students build science, engineering, and technical skills. Members are encouraged to use their knowledge to build innovative designs. Our goal is to produce students who are well-rounded and self-confident.

All students in our program practice gracious professionalism. Students are taught to treat each other with respect and kindness, while still engaging in fierce competition. Robotics students are active in their community, and they appreciate the value of each individual member of their team. They spend their time problem solving, working hard, and collaborating with other team members. Members strive to become leaders in their team, school, and community.
